## GREENHOUSE CULTURE OF FANCY-LEAVED CALADIUMS

SOIL should be slightly acid, ph 6.2 to 6.5. It should be composed of one-part each of leaf-mould, rotted manure and loam. Good drainage is necessary. Add 4-inch potful of Vigoro to each bushel of soil.

LIGHT is important. Give as much strong light as possible without burning leaves. The colors will not be bright unless plants have good strong light.

TEMPERATURE should be 80 to 85 degrees, the higher the better. Reduce heat gradually to harden off the plants. Start the bulbs in flats and place on steam flows if possible.

WATER sparingly until sprouts and roots are 4 to 6 inches long; then shift to 5 or 6-inch pots. Never allow the pots to dry out when in full growth.

### DISPLAY CARTON

Attractive display of Caladiums for resale. Standard pack of 150 large bulbs, named varieties and assorted.
